

Marshall Asch

Sr. DevOps Engineer

Belleville, ON — Available for contract & consulting engagements | hello@marshallasch.ca
marshallasch.ca | github.com/MarshallAsch | linkedin.com/in/marshallasch

SUMMARY

Sr. DevOps Engineer with 6+ years running production-grade, multi-cloud Kubernetes platforms (AWS EKS, GCP GKE) using Terraform IaC and GitOps delivery. Experience spans cost optimization, observability and incident response, identity and access management, and networking. Currently full-time with a flexible schedule that supports contract and consulting engagements on the side.

LANGUAGES & TECHNOLOGIES

- **Languages:** Python, TypeScript/JavaScript, Bash, SQL
- **Cloud & Platform:** AWS (EKS, IAM, VPC, NLB, PrivateLink, RDS, S3), GCP (GKE, Artifact Registry, Cloud SQL), Kubernetes, Helm, ArgoCD, Terraform, Atlantis
- **Reliability & Observability:** OpenTelemetry, SigNoz, Datadog, Prometheus, Grafana, OpenCost, on-call incident response
- **Security & Access Control:** IRSA / EKS Pod Identity / OIDC, Vault, cert-manager, Kyverno, Cloudflare Access, network segmentation
- **CI/CD:** GitHub Actions, Docker, Renovate, GitOps (ArgoCD ApplicationSet)

WORK EXPERIENCE

Plex, Inc. — Remote

Sr. DevOps Engineer (promoted from DevOps Engineer)

September 2026 – Present

DevOps Engineer

May 2022 – September 2026

- Own and operate a multi-cloud (AWS EKS + GCP GKE) Kubernetes platform across 4 clusters (~200 nodes) supporting production traffic, using Terraform IaC and ArgoCD GitOps for change management and rollback.
- Led a phased, zero-downtime migration of production ingress from ingress-nginx to Envoy Gateway across 29 repositories, using a gradual, weighted-DNS cutover; fully retired the legacy ingress across all EKS clusters.
- Led a cross-team cloud identity hardening initiative replacing static credentials with IRSA, EKS Pod Identity, and OIDC.
- Investigate and resolve production incidents using OpenTelemetry traces and Prometheus/Grafana/SigNoz dashboards across a distributed, multi-cluster environment.
- Built multi-cluster, multi-cloud cost attribution tooling (OpenCost) and corrected a 30–35% overstatement in compute cost by wiring in real billing and spot-pricing data.
- Reduced container registry storage costs 86% (AWS ECR) and 55% (GCP Artifact Registry) by validating and replaying lifecycle policies against 34,500+ image versions with zero in-use images deleted.
- Implemented dual-stack VPC networking and a cross-cloud site-to-site VPN, managing DNS and access policy as Terraform-defined code.

Value Connect — Guelph, ON

DevOps Engineer (promoted from Junior Software Developer)

January 2021 – May 2022

- Built and maintained CI/CD pipelines automating deployment of a Java Spring Boot application backed by MySQL on AWS.
- Reduced AWS infrastructure costs by approximately 23% within the first month by rightsizing and cleaning up unused resources.
- Identified and corrected release-process gaps that had been allowing faulty code to reach production.

ADDITIONAL TECHNICAL EXPERIENCE

- **Security incident response (self-hosted infrastructure, 2020 – Present):** operate a ~70-container environment with SSO and intrusion detection (CrowdSec); handled a real compromise end to end — forensics, credential rotation, and network segmentation.
- **Founder & operator, dive-tec.ca (2026 – Present):** built and self-host a multi-tenant SaaS platform (Next.js, Prisma, MariaDB) with per-tenant custom domains and email, subscription billing, and payments — full lifecycle ownership from infrastructure to production support.
- **Open source maintainer, Fill Station (2025 – Present):** built a role-based, OIDC-authenticated web app for equipment maintenance and compliance tracking, with automated reminders for regulatory due dates.

EDUCATION

M.Sc. Computer Science, University of Guelph — Distributed Systems / Mesh Networking

2022

B.Comp. (Hons) Computer Science, University of Guelph — Degree with Distinction

2019
